<code>extract_time_label</code>	<i>Match, Parse and Format Timestamps from Text</i>
---------------------------------	---

Description

This function reads and parses timestamps from text and then outputs a differently formatted string representing the same timestamp.

Usage

```
extract_time_label(text)
```

Arguments

<code>text</code>	Input text.
-------------------	-------------

Value

A formatted timestamp string.

<code>gqg</code>	<i>Chop a String of Text to a Specific Width</i>
------------------	--

Description

Chop a String of Text to a Specific Width

Usage

```
gqg(x, textwidth)
```

Arguments

<code>x</code>	A string.
<code>textwidth</code>	Desired width of output strings.

Value

A string with more newline characters.

`gqg_paragraph`*Chop a String of Text to a Specific Width*

Description

Chop a String of Text to a Specific Width

Usage

```
gqg_paragraph(s, textwidth)
```

Arguments

<code>s</code>	A string.
<code>textwidth</code>	Desired width of output strings.

Value

A string with more newline characters.

`locate_last_space_before`*Locate Last Space Before a Space in a String*

Description

Locate Last Space Before a Space in a String

Usage

```
locate_last_space_before(s, x)
```

Arguments

<code>s</code>	A string.
<code>x</code>	An index.

Value

The position of the last space character in `s` before `x`.

repair_latex_string	<i>Escape A Few Things</i>
---------------------	----------------------------

Description

Replace certain characters in a string with escaped versions of those same characters for the benefit of LaTeX.

Usage

```
repair_latex_string(x)
```

Arguments

x	A text string.
---	----------------

Value

A text string with some escaped characters.

replace_at_i	<i>Replace a Character at a Location in a String</i>
--------------	--

Description

Replace a Character at a Location in a String

Usage

```
replace_at_i(s, i, x = "\n")
```

Arguments

s	A string.
i	An index.
x	A character.

Value

The string s but with character x inserted at position i.

strip_time_headings	<i>Remove Datetime Strings from Text</i>
---------------------	--

Description

Removes all datetime headings like "% Tue 3 Mar 09:20:25 GMT 2020".

Usage

```
strip_time_headings(text)
```

Arguments

text	A string of text, possibly containing datetime headings.
------	--

Value

The input string with all datetime headings removed.

ymd_text_format	<i>Convert a Date Into Text.</i>
-----------------	----------------------------------

Description

This takes a ymd (e.g. 2024/09/01) and returns the same date in text format (e.g. Sunday 1 September 2024).

Usage

```
ymd_text_format(ymd)
```

Arguments

ymd	A date in ymd format.
-----	-----------------------

Value

A date string.
